

# Field Guides for Licensing

Methologica offers a series of DIY resources (we call them Field Guides) to assist with the development and implementation of scalable design research and evaluation initiatives.

A Planning Guide for Post Occupancy Evaluation: The ABCs of POEs, 2016 has been developed for the healthcare facility context. Field Guides for Design Research & Evaluation in other settings are also forthcoming.

Our Field Guides include:

- engagement and recruitment materials
- data collection protocols
- naturalistic observation guide and iPad application
- moving interview scripts
- focus group manuals
- surveys

a selection of our current measures along with codebooks for analysis (currently available in English and Portuguese; with French translation in development), and

- custom reports from existing data sets for completed design research & evaluation projects (available upon request).

A complete listing and preview of our Methologica Field Guides, and corresponding offerings for coaching on their implementation, will be featured here in the Fall 2020.
